Miniature compression force transducer, model F1814

Description

The model F1814 miniature compression force transducer, with measuring ranges up to 1,000 N, is particularly suitable for use in areas where installation space is critical.

Due to its very small dimensions and solid construction, this miniature force transducer, manufactured from stainless steel or aluminium, can be used in the widest range of industrial areas, in test facilities and in the laboratory.

Notes

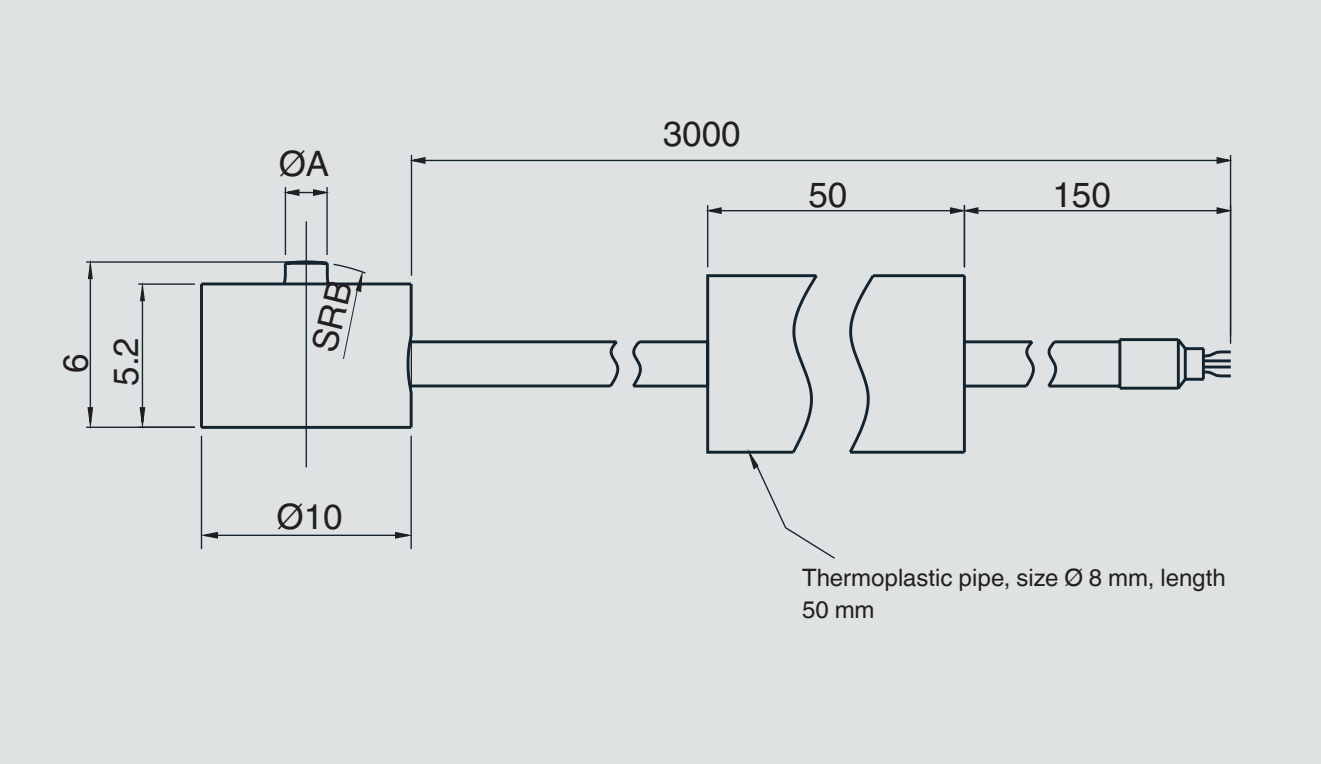

To avoid overloading, it is advantageous to connect the force transducer electrically during assembly and to monitor the measured value.

The measuring force must be introduced through the centre and free of transverse force. When assembling the force transducer, care should be taken that the support surface is flat.
