Compression force transducer, model F1821

Description

The model F1821 compression force transducer is available in measuring ranges up to 100 kN. Its compactness enables a universal and reliable use in industry and laboratories.

This force transducer is easy to handle and its small dimensions predestine it particularly for use in narrow structures with limited space in which compression forces must be measured.

Notes

To avoid overloading, it is advantageous to connect the force transducer electrically during assembly and to monitor the measured value.

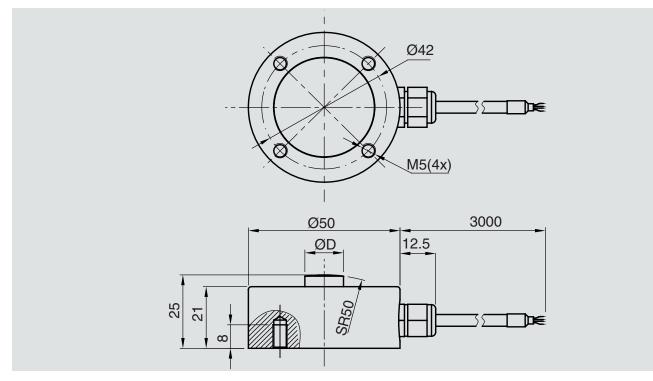

The measuring force must be introduced through the centre and free of transverse force. When assembling the force transducer, care should be taken that the support surface is flat.
