

OEM pressure sensor For mobile working machines Model MH-4

WIKA data sheet PE 81.63

Applications

- Working pressure measurement
- Control pressure measurement

Special features

- Developed for the extreme operating conditions in mobile working machines
- Reliability and highest accuracy over the entire life cycle
- Customer-specific adaptations and individualisation
- High production capacities

OEM pressure sensor, model MH-4

Description

The model MH-4 is a powerful, reliable and extremely resilient pressure sensor. The challenges in practice are high: For safe machine operation, the sensor must deliver high-precision measured data, even under the most demanding conditions. With constant performance stability throughout the entire life cycle, the model MH-4 ensures the greatest possible operational reliability.

Thanks to numerous interfaces, customer-specific adaptations and individualisation, the model MH-4 is ideal as an OEM pressure sensor. Since it never needs maintenance, the total cost of ownership is minimal.

Measuring ranges

Gauge pressure				
bar	0 ... 40	0 ... 60	0 ... 100	0 ... 160
	0 ... 250	0 ... 400	0 ... 600	0 ... 1,000
psi	0 ... 500	0 ... 1,000	0 ... 1,500	0 ... 2,000
	0 ... 3,000	0 ... 5,000	0 ... 8,000	0 ... 10,000

1 bar = 0.1 MPa

Other measuring ranges on request

Overload safety

≤ 400 bar [≤ 5,000 psi]:	3 times
600 bar [8,000 psi, 10,000 psi]:	2 times
1,000 bar:	1.5 times

The overload safety is based on the measuring range. Depending on the selected process connection and sealing, restrictions in overload safety can result.

Vacuum tightness

Yes

Output signals

Signal type	Signal
Current (2-wire)	4 ... 20 mA
Voltage (3-wire)	DC 1 ... 10 V
	DC 1 ... 5 V
	DC 0.5 ... 4.5 V
Ratiometric (3-wire)	DC 0.5 ... 4.5 V
Pulsewidth modulation PWM (3-wire)	10 ... 90 % pulse-duty factor High level: DC 3 ... 12 V (selectable in 1 V steps) Output frequency: 0.25 ... 2 kHz (selectable in 0.25 kHz steps)

Other output signals on request

Signal clamping (option)

The range of the output signal can be limited. For this purpose, a lower and an upper signal threshold are defined in the sensor electronics. If the output signal reaches these threshold values, the sensor outputs a defined, constant signal value. Therefore, in operation, unwanted pressure or signal ranges are filtered out.

Diagnostic function (option)

Permanent errors in the sensor electronics and temporary system overpressures can be output through defined constant output signals. A permanent error signal signifies a sensor defect and cannot be reset. The temporary error signal is reset as soon as the system pressure once again lies under the error threshold. In the application, one can therefore realise an efficient system diagnosis.

Load

- Current (2-wire): ≤ (power supply - 7.8 V) / 0.022 A
- Voltage (3-wire): ≥ max. output voltage / 1 mA
- Ratiometric (3-wire): ≥ 4.5 kΩ
- Pulsewidth modulation (3-wire): ≥ 10 kΩ

Voltage supply

Power supply

Max. power supply with UL approval: DC 35 V

■ Current output (2-wire)

4 ... 20 mA: DC 8 ... 36 V

■ Voltage output (3-wire)

DC 1 ... 10 V: DC 12 ... 36 V

DC 1 ... 5 V: DC 8 ... 36 V

DC 0.5 ... 4.5 V: DC 8 ... 36 V

■ Ratiometric output (3-wire)

DC 0.5 ... 4.5 V: DC 5 V \pm 10 %

■ Pulsewidth modulation PWM (3-wire)

10 ... 90 % pulse-duty factor: (high level + DC 1 V) (min. DC 8 V) ... 36 V

Total current consumption

■ Current output (2-wire): \leq 25 mA

■ Voltage output (3-wire): \leq 10 mA

■ Ratiometric output (3-wire): \leq 10 mA

■ Pulsewidth modulation (3-wire): \leq 10 mA

Time response

Settling time per IEC 62594

1 ms

Signal damping (option)

2 / 4 / 9 / 18 / 37 / 75 / 150 ms

Switch-on time

200 ms

Reference conditions (per IEC 61298-1)

Temperature

15 ... 25 °C [59 ... 77 °F]

Atmospheric pressure

860 ... 1,060 mbar [12.5 ... 15.4 psi]

Air humidity

45 ... 75 % r. h.

Power supply

DC 24 V (DC 5 V with ratiometric output)

Mounting position

Calibrated in vertical mounting position with process connection facing downwards.

Accuracy specifications

Non-linearity (per IEC 61298-2)

$\leq \pm 0.25$ % of span (BFSL)

Long-term drift (per IEC 61298-2)

$\leq \pm 0.1$ % of span

Total error band

Including non-linearity, hysteresis, non-repeatability, zero point and full scale deviation, temperature error, temperature hysteresis and error through atmospheric air pressure fluctuations

Operating conditions

Ingress protection (per IEC 60529 and ISO 20653)

see electrical connections

Permissible temperature ranges

- Ambient: -40 ... +125 °C [-40 ... +257 °F]
- Medium: -40 ... +125 °C [-40 ... +257 °F]
- Storage: -40 ... +70 °C [-40 ... +158 °F]

Depending on the choice of sealing on the process connection, the electrical connection and UL approval, there may be limitations in the medium and ambient temperatures (for restrictions see “Process connections, sealings” and “Electrical connections”).

Vibration resistance (per IEC 60068-2-6)

40 g, 10 2,000 Hz

Continuous vibration resistance (per IEC 60068-2-6)

10 g, 10 ... 2,000 Hz

Shock resistance (per IEC 60068-2-27)

100 g, 11 ms

EMC field

- Current output (2-wire): 100 V/m (per ISO 11452-2)
- Voltage output (3-wire): 100 V/m (per ISO 11452-2)
- Ratiometric output (3-wire): 100 V/m (per ISO 11452-2)
- Pulsewidth modulation (3-wire): 30 V/m (per IEC 61326-2-3)

Service life

100 million load cycles

Free-fall test (following IEC 60721-3-2)

Individual packaging: 1 m [3.28 ft]

Multiple packaging: 0.5 m [1.64 ft]

Materials

Wetted parts

304L, PH grade steel

Non-wetted parts

304L, electrical connection made of highly resistant glass-fibre reinforced plastic (PBT)

Process connections

Standard	Thread size	Max. nominal pressure	Sealing and temperature range	
			Standard	Option
DIN EN ISO 1179-2 (formerly DIN 3852-E)	G ¼ A	600 bar [8,700 psi]	NBR -40 ... +100 °C [-40 ... +212 °F]	FPM/FKM -20 ... +125 °C [-4 ... +257 °F]
DIN EN ISO 9974-2 (formerly DIN 3852-E)	M14 x 1.5	600 bar [8,700 psi]		
ISO 6149-2	M14 x 1.5	600 bar [8,700 psi]		
JIS B2351-1	G ¼ x 10, form O with collar	600 bar [8,700 psi]		
	G ¾, form O with collar	600 bar [8,700 psi]		
SAE J514	7/16-20 UNF-2A, O-ring BOSS	600 bar [8,700 psi]		
	9/16-18 UNF-2A, O-ring BOSS	600 bar [8,700 psi]		
	3/4-16 UNF-2A, O-ring BOSS	600 bar [8,700 psi]		
	7/16-20 UNF-2A, sealing cone 74°	800 bar [11,600 psi]	-	-
ANSI/ASME B1.20.1	⅜ NPT	400 bar [5,800 psi]		
	¼ NPT	1,000 bar [14,500 psi]		
KS	PT ¼	1,000 bar [14,500 psi]		
	PT ¾	1,000 bar [14,500 psi]		
ISO 7	R ¼	1,000 bar [14,500 psi]		
	R ¾	1,000 bar [14,500 psi]		
EN 837	G ⅝ B	400 bar [5,800 psi]	Copper -40 ... +125 °C [-40 ... +257 °F]	Stainless steel -40 ... +125 °C [-40 ... +257 °F]
	G ¼ B	1,000 bar [14,500 psi]		
	G ¾ B	1,000 bar [14,500 psi]		

Details must be tested separately in the respective application. The specified values for the max. nominal pressure serve only as a coarse orientation. The values depend upon the temperature, the seals used, the selected torque, the type and the material of the mating thread and the prevailing operating conditions.

Other process connections on request

Restrictor (option)

As an option, for applications that can lead to pressure spikes, a restrictor with a pressure port of 0.3 mm is available.

Spanner flats to screw in

Version	
Standard	Hexagon (SW 22) integrated into case
Option	Additional hexagon (SW 27) above the process connection. Suitable for the installation with socket wrench.

For details see dimensions
